

Listing of the Claims

Claims 1-7 (canceled)

Claim 8 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable, [The film according to Claim 1] wherein the multilayer film has an impact energy of from 2.32 to 3.45 ft-lbs.

Claim 9 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable, [The film according to Claim 1] wherein the multilayer film has an impact energy of at least 3.08 ft-lbs.

Claims 10-14 (canceled)

Claim 15 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film

is a multilayer film and is heat shrinkable. [The multilayer film according to Claim 1,]

wherein the film comprises:

- (A) a first layer comprising ethylene/vinyl acetate copolymer;
- (B) a second layer comprising a blend of homogeneous/ethylene octene copolymer having long chain branching, and ethylene/butyl acrylate copolymer;
- (C) a third layer comprising vinylidene chloride/methyl acrylate copolymer; and
- (D) a fourth layer comprising a blend of ethylene/vinyl acetate copolymer and linear low density polyethylene.

Claim 16 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable. [The multilayer film according to Claim 1,]

wherein the film comprises:

- (A) a first layer comprising ethylene/vinyl acetate copolymer;
- (B) a second layer comprising a blend of homogeneous ethylene octene copolymer having long chain branching and ethylene/methacrylic acid copolymer;
- (C) a third layer comprising vinylidene chloride/methyl acrylate copolymer; and
- (D) a fourth layer comprising a blend of ethylene/vinyl acetate copolymer and linear low density polyethylene.

Claim 17 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable, [The multilayer film according to Claim 1,] wherein the film comprises:

- (A) a first layer comprising ethylene/vinyl acetate copolymer;
- (B) a second layer comprising a blend of homogeneous ethylene/octene copolymer having long chain branching and anhydride grafted ethylene/vinyl acetate copolymer;
- (C) a third layer comprising vinylidene chloride/methyl acrylate copolymer;
- (D) a fourth layer comprising a blend of ethylene/vinyl acetate copolymer and linear low density polyethylene.

Claim 18 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to then carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable, [The multilayer film according to Claim 1,] wherein the film comprises:

- (A) a first layer comprising ethylene/vinyl acetate copolymer;
- (B) a second layer comprising a blend of homogeneous ethylene/octene copolymer having long chain branching and ethylene/vinyl acetate copolymer;

(C) a third layer comprising vinylidene chloride/methyl acrylate copolymer;

(D) a fourth layer comprising a blend of ethylene/vinyl acetate copolymer and linear low density polyethylene.

Claim 19 (currently amended): A film suitable for packaging comprising a homogeneous single site catalyzed copolymer of ethylene and an alpha-olefin having from three to ten carbon atoms, said single site catalyzed copolymer having long chain branching, wherein said film is a multilayer film and is heat shrinkable, [The multilayer film according to Claim 1,] wherein the film comprises:

(A) a first layer comprising ethylene/vinyl acetate copolymer;

(B) a second layer comprising homogeneous ethylene/octene copolymer having long chain branching;

(C) a third layer comprising ethylene/vinyl acetate copolymer; and

(D) a fourth layer comprising vinylidene chloride/methyl acrylate copolymer; and

(E) a fifth layer comprising a blend of ethylene/vinyl acetate copolymer and linear low density ethylene/alpha-olefin copolymer.

Claims 20-26 (canceled)
